

Company PROFILE

In today's marketing of architectural services it is essential that we provide lasting aesthetic designs tailored to the client's criteria. Yet often overlooked in the selection of an architect are the services we take for granted, such as economical designs providing savings to the client, well-detailed construction documents, providing pricing with few or no extras in construction cost, and prompt response at all levels of service to the entire project team.

Harris Architects has provided the full scope of services in the Design/Build format since 1976, to institutional developers, brokers, contractors, and owners, in order to advance our team approach for successful projects.

Our substantial architectural practice is known for expertise in office, retail, healthcare, and industrial projects. We have a core of experienced licensed senior architects and project managers who stay involved with the project from beginning to end. Our documents are produced in a timely and efficient manner. Our project management approach is complimentary to client-focused, small or large scale operations.

Harris Architects, in just the past eight years, has planned and designed projects totaling over 75 million square feet, in 18 states and Ontario, Canada.

We pride ourselves on providing a full scope of architectural services, including master planning, consulting, site investigation, design schematics, design development, construction documents, landscape design, specifications, and contract administration. Our team utilizes the latest CAD software, 3-D/BIM software, and LEED certifiable project processes.
